

SCRAM CONTINUOUS ALCOHOL MONITORING:

# Quick Facts

## Transdermal Analysis/Continuous Alcohol Monitoring

- Approximately one percent of alcohol we consume is expelled, unmetabolized, via our pores as “insensible perspiration.”
- 24/7 transdermal testing for alcohol consumption is known as Continuous Alcohol Monitoring®, or “CAM.”

## The SCRAM CAM® Bracelet

- Weighs 5.8 ounces.
- Automatically samples the wearer’s perspiration every 30 minutes, 24 hours a day, to test for alcohol consumption.
- Takes additional tests to determine whether any kind of tampering has taken place.

## Addition of Optional RF/House Arrest Monitoring

- SCRAM CAM includes alcohol and optional house arrest monitoring in the same bracelet.
- House arrest works by monitoring a continuous radio frequency (RF) signal between the bracelet and a base station placed in the home. Any disruption to this signal will create an alert.
- House arrest is also known as “curfew monitoring,” “RF monitoring,” “electronic monitoring,” or “home detention.” House arrest is **NOT** the same as GPS (Global Positioning System).

## The SCRAM CAM Base Station

- Is placed in a client’s home or work.
- Connects via any home communications method.
- Sends a signal at a predetermined time each day to the bracelet to download alcohol testing data. This is generally done once per day, but can be done as often as six times each day.
- Via a radio frequency signal, all data stored in the bracelet is transmitted to the base station, and the base station sends the data to SCRAMNET.
- Downloads system updates from SCRAMNET to the bracelet.

## SCRAMNET®

- A secure web-based application that is managed and hosted by SCRAM Systems.
- Allows agencies to customize testing and reporting schedules and to access and monitor test results at any time, from any location.
- Accessed by monitoring agencies just like any other website via standard Internet browsers (such as Internet Explorer version 6.0 and higher).

## The Company

- Founded: 1997
- Headquarters: Littleton, CO
- Employees: 262
- CAM R&D: 1997 – 2002
- CAM BETA testing: March 2002
- Product launch: March 2003
- SCRAM CAM with optional house arrest: February 2010
- Additional products: SCRAM GPS® 2013
- SCRAM House Arrest® 2013
- SCRAM Remote Breath® 2014
- SCRAM Nexus® 2019
- SCRAM TouchPoint™ 2019
